

90-Day QA Career Accelerator

Break Into Software Testing with Real-World Training

No fluff. No endless theory. No guessing what employers want.

Learn the exact skills needed to become job-ready in QA — from someone with **25+ years in testing leadership and hiring experience**.

- ☑ Beginner Friendly
- ☑ Career Changers Welcome
- ☑ Practical Examples
- ☑ Interview Focused

👉 **Join Inside STLC Academy Today**

THE PROBLEM

Trying to get into QA right now can feel overwhelming.

You've probably seen:

Random YouTube tutorials with no structure

Generic courses full of theory

Advice from people who've never hired anyone

Confusing tool lists that make you feel behind

Job ads asking for experience you don't have

So, people stay stuck.

Watching more content.
Collecting more certificates.
Still unsure how to actually get hired.

THE SOLUTION

🎓 Inside STLC Academy

A step-by-step training platform designed to help beginners and career changers become confident, practical, employable testers.

This isn’t built by influencers.

It’s built by a real QA leader who understands:

What companies need

What interviews look like

What junior testers struggle with

How to stand out in today’s market

WHAT YOU'LL LEARN

- Module 1: Testing Foundations

Understand QA properly, how software teams work, and what testers actually do.

- Module 2: Core Testing Skills

Functional, regression, exploratory, risk-based testing.

- Module 3: Bug Reporting Like a Pro

Write bugs developer's respect.

- Module 4: Test Cases & Coverage

Create structured, smart test scenarios.

- Module 5: JIRA & Agile Teams

How modern QA teams really work.

- Module 6: API Testing

Learn Postman and backend confidence.

- Module 7: SQL for Testers

Validate data and stand out.

- Module 8: Automation Basics

Understand Playwright / Selenium without overwhelm.

- Module 9: Build a Portfolio

Show proof of skills.

- Module 10: Interview Mastery

What hiring managers actually want.

- Module 11: CV + LinkedIn Optimisation
- Module 12: Landing Your First Role

WHY THIS IS DIFFERENT

Most courses teach information.

We teach employability.

That means:

- ☑ Real examples
- ☑ Practical exercises
- ☑ Job-focused learning
- ☑ Hiring manager insights
- ☑ Confidence building
- ☑ Clear roadmap

=

WHO THIS IS FOR

Perfect if you are:

Starting from zero

Changing career at 30 / 40 / 50+

Returning to work

Stuck in helpdesk/admin/customer service roles

Interested in tech but not coding-heavy careers

Junior testers wanting structure

WHO THIS IS NOT FOR

❌ People wanting instant results without effort
❌ Senior automation engineers
❌ Anyone expecting magic shortcuts

WHAT STUDENTS WILL WALK AWAY WITH

After completing the Academy, you'll have:

☑ Testing knowledge that makes sense
☑ Practical examples to discuss in interviews
☑ Portfolio-ready evidence
☑ Confidence with tools employers ask for
☑ Clear next steps into QA jobs

ABOUT YOUR INSTRUCTOR

David Oxley

25+ years in Software Testing / QA

QA Leadership & Hiring Experience

Interviewed and hired hundreds of candidates

YouTube creator of Inside STLC

Known for practical, honest advice

Phase 1: Foundations (Days 1–30)

Week 1: What is Software Testing?

Learn the purpose of testing, the role of QA, and how software development works.

Task: Pick an app and identify 10 potential risks or failures.

Question to consider: How do you decide what is worth testing?

Week 2: Testing Types

Understand functional vs non-functional testing, regression, smoke, and exploratory testing.

Task: Write 5 test cases for a login page.

Question: Are your test cases covering real user behaviour or just obvious paths?

Week 3: Bug Reporting

Learn how to write clear, structured bug reports with proper severity and priority.

Task: Find and document 3 bugs.

Question: Would a developer understand and fix your bug without asking questions?

Week 4: Test Design

Explore test case design techniques and edge case thinking.

Task: Create a small test suite.

Question: What are you NOT testing and why?

Phase 2: Practical Skills (Days 31–60)

Week 5: Tools

Introduction to JIRA and test management tools.

Task: Create structured bug reports.

Question: Are you writing bugs like a tester or thinking like a product owner?

Week 6: API Testing

Learn basics of APIs and how to test them using Postman.

Task: Test a public API.

Question: What happens when the API fails?

Week 7: Databases

Understand SQL basics and data validation.

Task: Run SELECT queries.

Question: How do you know the data is correct?

Week 8: Automation Intro

Understand what automation is and when to use it.

Task: Follow a beginner tutorial.

Question: Should this test even be automated?

Phase 3: Job Ready (Days 61–90)

Week 9: Portfolio

Compile your work into a structured portfolio.

Question: Would this convince a hiring manager?

Week 10: Real Project

Test a real-world application end-to-end.

Question: Are you testing like a user or just following steps?

Week 11: Interview Prep

Practice answering real QA interview questions.

Question: Can you explain your thinking, not just definitions?

Week 12: Job Applications

Start applying for roles and tracking progress.

Question: Are you waiting too long to apply?

Next Step

If you want deeper, real-world examples and practical walkthroughs, consider upgrading to

Inside STLC Academy.

This roadmap gives you direction — the Academy shows you exactly how to execute.
