# AI Prompt Pack for Exploratory Testing

## Practical prompts to find real bugs — not just run more tests

Exploratory testing isn’t about clicking around — it’s about thinking while testing. This prompt pack is designed to help you use AI as a support tool for exploration, not a replacement for human judgement.

Inside STLC

## How to Use This Pack

Use these prompts before, during, and after exploratory testing sessions. They work best when paired with a clear mission, time-boxed sessions, and reflective reporting.

Inside STLC

# Risk-Based Exploration Prompts

- What are the highest-impact failures in this feature?
- What assumptions does this workflow rely on?
- What user behaviours could cause silent failure?
- What recently changed that could invalidate previous tests?

Inside STLC

# Exploratory Test Charter Prompts

- Create exploratory test charters focused on usability and UX breakdowns.
- Create charters focused on data integrity and state transitions.
- Create charters focused on error handling and recovery.
- Create charters focused on interruptions and abnormal workflows.

Inside STLC

# Bug Adjacency Prompts

- If this bug exists, what nearby functionality could fail in the same way?
- What other features share this logic or data?
- What happens in similar but slightly different states?
- What failures would be costly but hard to notice?

Inside STLC

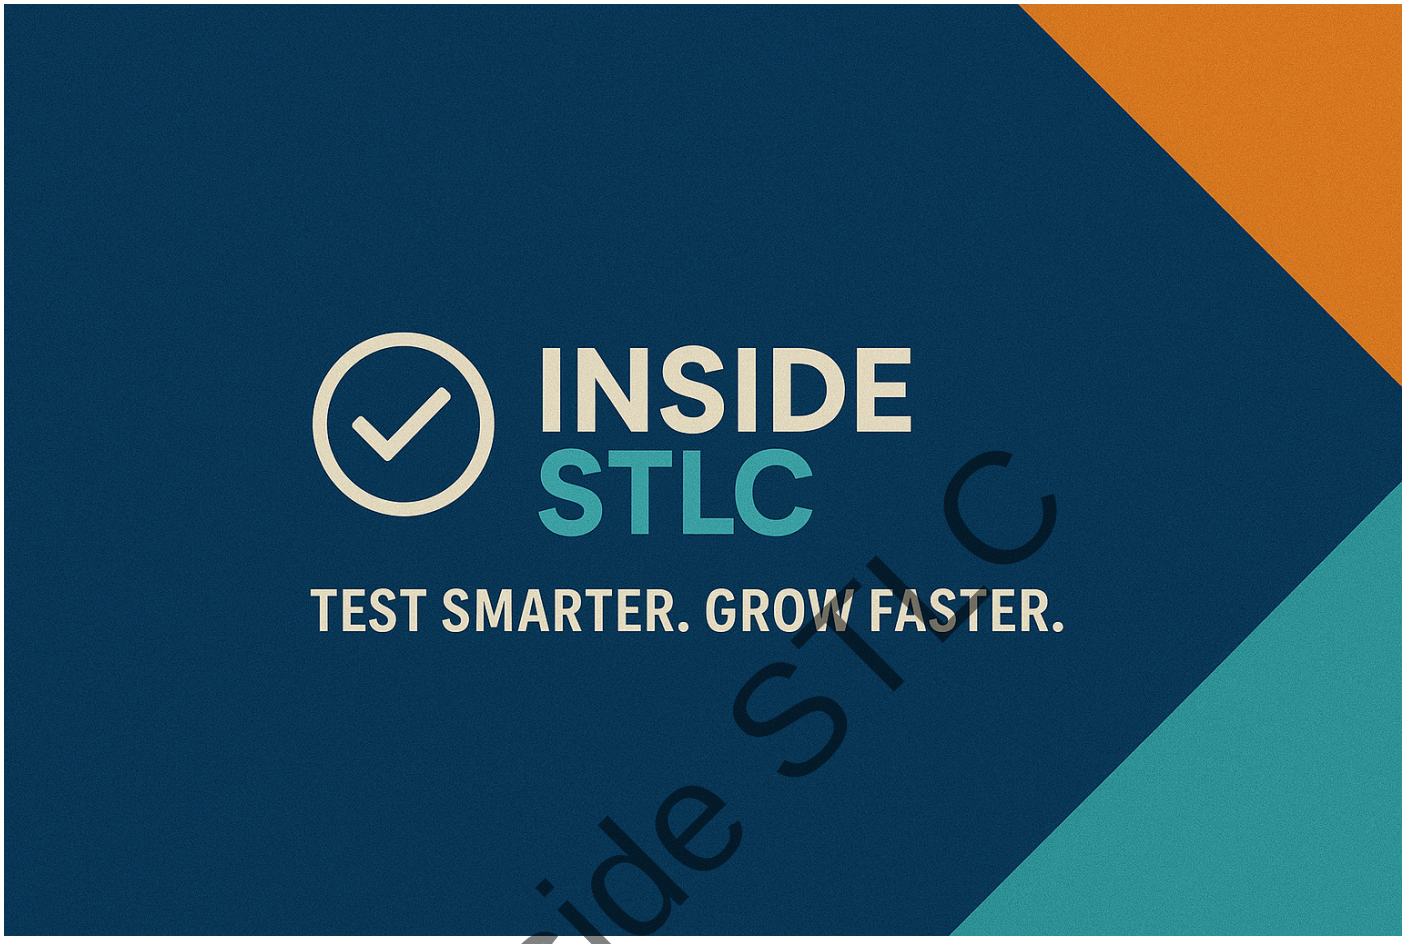

# Session Notes & Reporting Prompts

- Summarise findings by risk, not steps.
- What did you learn about the system?
- What areas now need deeper exploration?
- What assumptions were proven wrong?
